Machine Learning for the Detection of Network Attacks

Analyse the machine learning algorithms on the [CICIDS 2017 Dataset] for clasification of network attacks. (https://www.unb.ca/cic/datasets/ids-2017.html):

- Support Vector Machine (SVM)
- Decision Tree
- Naive Bayes
- K Means Clustering
- K Nearest Neighbours

Import required libraries.

```
In [1]:
         import glob
         import matplotlib.pyplot as plt
         import numpy as np
         import pandas as pd
         import seaborn as sn
         import time
         from numpy import array

         from sklearn.metrics import confusion matrix
         from sklearn.metrics import precision recall fscore support as score
         from sklearn.metrics import completeness score, homogeneity score, v measure score
         from sklearn.model selection import train test split
```

Loading the dataset

The implemented attacks include Brute Force FTP, Brute Force SSH, DoS, Heartbleed, Web Attack, Infiltration, Botnet and DDoS.

Datasets is available in 8 different csv files.

- Monday-WorkingHours.pcap_ISCX.csv
- Tuesday-WorkingHours.pcap_ISCX.csv
- Wednesday-workingHours.pcap_ISCX.csv
- Thursday-WorkingHours-Morning-WebAttacks.pcap_ISCX.csv
- Thursday-WorkingHours-Afternoon-Infilteration.pcap_ISCX.csv
- Friday-WorkingHours-Morning.pcap_ISCX.csv
- Friday-WorkingHours-Afternoon-PortScan.pcap_ISCX.csv
- Friday-WorkingHours-Afternoon-DDos.pcap_ISCX.csv

8 different csv files of cicids dataset needs to be concatenated into a single csv file.

```
In [2]:
         # # path to the all 8 files of CICIDS dataset.
         # path = './datasets'
         # all files = glob.glob(path + "/*.csv")
         # # concatenate the 8 files into 1.
         # dataset = pd.concat((pd.read csv(f) for f in all files))
In [3]:
         # # saving the combined dataset to disk named cicids.csv
         # dataset.to csv('cicids')
In [4]:
         dataset=pd.read_csv('cicids.csv')
In [5]:
         # Dimenions of dataset.
         print(dataset.shape)
         (2827876, 79)

Splitting the dataset

Splitting dataset in 60:20:20 ratio, for training, testing and validation dataset. By stratifying with y label proportions of attacks remain the same throughout the 3 sets.

```
In [23]: # 3 Different labeling options
    attacks = ['Label', 'Label_Category', 'Attack']

# xs=feature vectors, ys=labels
    xs = dataset.drop(attacks, axis=1)
    ys = dataset[attacks]

# split dataset - stratified
    x_train, x_test, y_train, y_test = train_test_split(xs, ys, test_size=0.3, random_state)
```

Removing the columns with single unique values as it has no contribution in classification

```
'Fwd_Avg_Bytes_Bulk',
'Fwd_Avg_Packets_Bulk',
'Fwd_Avg_Bulk_Rate',
'Bwd_Avg_Bytes_Bulk',
'Bwd_Avg_Packets_Bulk',
'Bwd_Avg_Bulk_Rate']

In [25]: x_train = x_train.drop(to_drop, axis=1)
x_test = x_test.drop(to_drop, axis=1)
dataset_copy = dataset.drop(to_drop, axis=1)

In [26]: x_train.shape

Out[26]: (1979465, 69)
```

Data Normalization

Min-max normalization technique is used to normalize the numerical values in dataset.

```
In [27]: # Normalise
    min_max_scaler = MinMaxScaler().fit(x_train)

# Apply normalisation to dataset
    x_train = min_max_scaler.transform(x_train)
    x_test = min_max_scaler.transform(x_test)
```

Feature Selection

Selecting K-best features by using chi2 scoring function for features

Number of features selected: 40

6/27/2021 project 3 SVM

```

Applying Machine Learning classifier models

Each machine learning algorithm is applied in three different categories:

- 1. On all attack labels (12).
- 2. Binary Classifier (2).

In [33]:

3. Multi-class Classifier (7).

And then evaluate performance of each algorithm by confusion matrix plot. Evaluate Accuracy, Precision, Recall, F1-score.

1. Support Vector Machine (SVM)

```
classifier = LinearSVC()
           1. a) On all attack labels.
In [34]:
          # fit the model
          start = time.time()
           classifier.fit(x_train, y_train.Label)
           end = time.time()
           training_time = end - start
           print("Model Training Time is : ", training_time)
```

Model Training Time is : 462.54634523391724

```
In [35]: # predicting test results of SVM classifier on all labels.

start = time.time()
y_predict = classifier.predict(x_test)
end = time.time()
testing_time = end - start

print("Model Testing Time is : ", testing_time)
```

Model Testing Time is: 0.14420056343078613

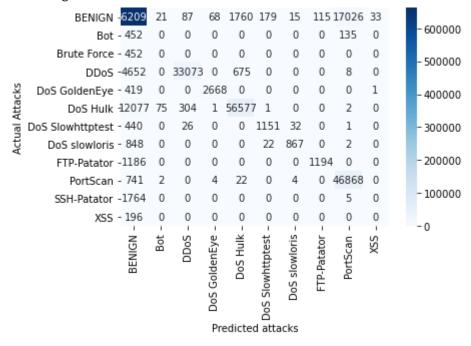

```
In [36]:
```

```
# Creating confusion matrix for SVM classifier on all labels.

confusion_svm_1 = pd.crosstab(y_test.Label, y_predict, rownames=['Actual Attacks'], col
print("Plotting Confusion Matrix of SVM classifier on all Labels ")

sn.heatmap(confusion_svm_1, annot=True, cmap= 'Blues', fmt='d')
plt.show()
confusion_svm_1
```
